PRE-FABRICATED ENGINEERED STAIR TREADS WITH A VENEERED FRONT FOR STAIR CLADDING

We are able to manufacture veneered stair treads where there is a requirement for a square end. The veneer is mitred onto a plywood substrate and then they are all glued together, see the image below.

We can make stair treads like these 260mm deep (wide) and 15mm or 20mm thick. The images are of our stair tread that matches the TW E962chevron. Subject to quantity we can manufacture treads like these to match any or of engineered floors. These would be pre-ordered in the quantity required.

The image to the left shows an example with the riser in place. We can make the riser in different widths depending on your requirement's.

This makes stair cladding extremely easy and efficient and will save a lot of time, labour and installation costs.
