

CUT LIQUID SCREED DRYING TIMES BY **50%**

If you want to cut liquid screed drying times by more than 50% and ensure your liquid screeds have been correctly commissioned, ForceDry temporary boilers are the answer.

- ForceDry boilers are very quick and easy to install, typically less than 15 minutes.
- Equipment can be installed directly onto the underfloor manifold so no first or second fix plumbing is required.
- ForceDry boilers can be installed 7 days after the screed has been poured.
- Equipment is easy to handle and manoeuvre on site.
- Compact design which takes up minimal space on site.
- ForceDry boilers can also be used to pre-heat screeds in preparation for some floor covering applications.
- With site overrun penalties in the thousands per week ForceDry boilers offer a very cost effective solution.
